

LEON PHAN

FULL-STACK SOFTWARE DEVELOPER

CONTACT

 0412358005
 laophanau@gmail.com
 <http://laophan.com>
 github.com/laophan74

SKILLS

Programming languages: JavaScript, TypeScript, Java, C#

Databases: MongoDB, PostgreSQL, Firebase

Frameworks and libraries: Node.js, React, Next.js, Express.js, Tailwind CSS

Cloud: AWS, Cloudinary, Cloud Firestore

AI Tools: Github Copilot, Codex

EDUCATION

Master of Information and Communications Technology

Western Sydney University

Sydney, Australia

2024-2026

Bachelor of Software Engineering

University of Information Technology

HCM City, Vietnam

2019-2023

EXPERIENCE

Intern

Integral Immersive Analytics Lab, Western Sydney University

Oct 2025 - Dec 2025

Technologies: JavaScript, React, Express.js, MongoDB

- Developed and maintained the lab's website
- Built and customized web pages to showcase research projects and publications
- Integrated backend data with frontend components for dynamic content rendering

Intern

ITR VN: Technology Design and Engineering

Oct 2022 - Dec 2022

Technologies: JavaScript, React, Express.js, MongoDB

- Developed a URL shortening web application using JavaScript, MongoDB, and Express.js
- Designed and implemented RESTful APIs for generating and retrieving shortened URLs
- Built database schema and handled data storage using MongoDB
- Tested and debugged backend functionalities to ensure reliability

PROJECTS

PullSight - AI-Assisted GitHub PR Review Dashboard

<https://pull-sight.vercel.app/>

Technologies: TypeScript, C#, React, ASP.NET Core Web API, Supabase PostgreSQL, GitHub OAuth, Gemini API, Vercel, Render

- Built and deployed a full-stack dashboard for browsing GitHub repositories, reviewing pull requests, fetching diffs, and generating AI-assisted code review feedback.
- Implemented GitHub OAuth, repository/PR browsing, AI review generation, review history, saved review details, and review comparison.
- Designed ASP.NET Core backend workflows with Supabase PostgreSQL persistence and caching by repository, PR number, and head SHA to avoid duplicate AI reviews.
- Integrated Gemini API for structured summaries, risk analysis, findings, and suggested test plans, with Markdown/JSON export and GitHub PR publishing support.
- Deployed the frontend to Vercel and backend to Render, with production configuration for CORS, OAuth callback handling, environment variables, and health checks.

LinkedOut - Full-Stack Social Networking Platform

<https://linkedout-frontend.vercel.app/>

Technologies: React, JavaScript, SCSS/Tailwind CSS, Node.js, Express.js, MongoDB, REST API, Cloudinary, Vercel

- Built and deployed a full-stack social networking application inspired by LinkedIn, with user authentication, profiles, posts, comments, likes, connections, messaging, and notifications.
- Implemented a React/Redux frontend with protected routes, responsive layouts, profile editing, post feeds, connection pages, message views, and notification screens.
- Designed and developed an Express.js REST API with JWT authentication, MongoDB models, validation, protected routes, and centralized API response handling.
- Built REST-based messaging and notification flows suitable for Vercel serverless deployment.
- Integrated image upload support with Cloudinary and configured frontend/backend environment variables, CORS handling, and Vercel deployment settings.
- Improved production readiness by fixing backend route ordering, serverless app initialization, post-update logic, and automatic activity tracking for likes, comments, connections, and messages.
